

## Mechanical Trowels

The ideal trowels for contractors who need hard-working, long-lasting, user-friendly machines.

Proven heavy-duty worm-drive design features large oil capacities and integral cooling fans to reduce heat build-up and are standard equipment on HTN, HTO and JWN-Series machines.

### HTN AND HTO-SERIES

It's your choice. Select a non-overlapping machine for paring or an overlapping machine for high-production flatwork. Models are available with Kohler, Onan and Vanguard gasoline engines, along with all the features you expect to find on a Whiteman ride-on trowel.

## Blades, Pans and Accessories

### Perfection lies in the details...

That's why Multiquip takes such care in designing the accessories for its distinctive line of power trowels.

#### Float Pans

- Super-Flat and Flat configurations are available for walk-behind and ride-on bowls.
- Floor flatness is dramatically improved on pours with stringent Finumber specifications.
- Easy movement from wet to dry areas—stabilizes surfaces that dry too rapidly by bringing moisture and fine particles to the surface.
- Shake-on toppings are easily applied.

#### Transport Dollies

#### Blades

- Original Multiquip blades ensure that your trowel consistently obtains the best possible results.
- A variety of styles are available for both ride-on and walk-behind trowels.
- Interchangeable with 99% of competitive models.
- Quick-change blades are designed with a channel mount design so they are easily removed for maintenance without tools.
- Endure-blades use heavy-gauge steel for maximum blade life. Standard on HTN and HTO series, they also fit most other trowel models.

EMR3 transport dolly for ease of maneuverability around the shop or jobsite.

#### Trowel Arm Fixture

- Quickly check the alignment of each bowl arm with this simple tool.

EMR1 Transport dolly (shown with JWN) for moving mechanical trowels around the workplace or on the jobsite.
